

## Content label for Rehoboth Community Choice Electricity Supply Program

ConEdison Solutions' customers are served through a regional power grid administered by the New England Independent System Operator. ConEdison Solutions supplies its customers with system power from this regional power grid, not from specific generating units. ConEdison Solutions procures renewable energy content to meet the Massachusetts renewable portfolio standard requirements and to supply voluntary green products chosen by customers. Information about ConEdison Solutions' renewable power content is shown below in the table on the right.

### Generation Prices (cents per kilowatt hour)

| Customer type  | Standard Option<br>(cents per kilowatt hour) | Greener Option<br>(cents per kilowatt hour) | Period in effect                 |
|--|--|---|----------------------------------|
| All Customers  | 0.0949                                       | 0.0978                                      | Jan. 2016 – Jan. 2018 meter read |
| Generation prices do not include regulated charges for customer service and delivery. Those charges are billed by your local distribution company. |  |   |                                  |

### ConEdison Solutions January 31, 2017 Disclosure Label Based on the most Current Data Available at the Time of Filing.

| New England System Mix     |                |
|----------------------------|----------------|
| Fuel                       | Percentages    |
| Biodiesel                  | 0.00%          |
| Biomass                    | 2.09%          |
| Coal                       | 2.88%          |
| Diesel                     | 1.56%          |
| Digester gas               | 0.06%          |
| Efficient Resource (Maine) | 0.27%          |
| Energy Storage             | 0.00%          |
| Fuel cell                  | 0.23%          |
| Geothermal                 | 0.00%          |
| Hydroelectric/Hydropower   | 5.98%          |
| Hydrokinetic               | 0.01%          |
| Jet                        | 0.02%          |
| Landfill gas               | 0.44%          |
| Municipal solid waste      | 1.13%          |
| Natural Gas                | 40.91%         |
| Nuclear                    | 28.12%         |
| Oil                        | 8.71%          |
| Solar Photovoltaic         | 1.54%          |
| Solar Thermal              | 0.00%          |
| Trash-to-energy            | 2.09%          |
| Wind                       | 2.29%          |
| Wood                       | 1.67%          |
| <b>Total</b>               | <b>100.00%</b> |

## Air Emissions

Emissions for each of the following pollutants are based on System Mix data provided by the New England Power Pool (NEPOOL) and ISO New England for the most current annual data available at the time of filing.

System average emission rates are based on the most current annual data available at the time of filing and were prepared for New England Power Pool (NEPOOL) by ISO New England.

### Emissions data:

#### ConEdison Solutions

| Emission Type                      | Lbs. per MWh |
|------------------------------------|--------------|
| Nitrogen Oxides (NO <sub>x</sub> ) | 0.759        |
| Sulfur Dioxide (SO <sub>2</sub> )  | 0.915        |
| Carbon Dioxide (CO <sub>2</sub> )  | 822.221      |

New Unit emissions data for CO<sub>2</sub> is 895 lbs/MWh; for NO<sub>x</sub> is 0.055 lbs/MWh; for SO<sub>2</sub> is 0.011 lbs/MWh

**Sulfur Dioxide (SO<sub>2</sub>)** is formed when fuels containing sulfur are burned, primarily coal and oil. Major health effects associated with SO<sub>2</sub> include asthma, respiratory illness and aggravation of existing cardiovascular disease. SO<sub>2</sub> combines with water and oxygen in the atmosphere to form acid rain, which raises the acid level of lakes and streams, and accelerates the decay of buildings and monuments.

**Nitrogen Oxide (NO<sub>x</sub>)** is formed when fossil fuels and biomass are burned at high temperatures. NO<sub>x</sub> contributes to acid rain and ground-level ozone (or smog), and may cause respiratory illness in children with frequent high level exposure. NO<sub>x</sub> also contribute to oxygen deprivation of lakes and coastal waters which is destructive to fish and other animal life.

**Carbon Dioxide (CO<sub>2</sub>)** is released when fossil fuels (e.g., coal, oil and natural gas) are burned. Carbon dioxide, a greenhouse gas, is a major contributor to global warming.

### Notes

The NEPOOL system mix represents all resources used for electricity generation in the region. ConEdison Solutions purchases power from the NEPOOL system.
